

unknown-traffic2

The flags seems to be in http packets.

This command extracts all data chunks labeled `CHUNK_xx` from the `traffic.pcap`, orders them, strips off the labels, concatenates them, and decodes the base64 to recover the hidden file or message.

```
strings traffic.pcap | grep CHUNK | sort | sed -E 's/^CHUNK_[0-9]+:/' | tr -d '\n' | base64 -d > result
```
